

Sakib Mahmood Saad

📞 01632954088 — ✉️ sakibsaad9988@gmail.com — 🔗 <https://www.linkedin.com/in/sakib-saad-ba49132a9/> — 🌐 <https://github.com/SakibSaad>

Summary — Versatile and adaptable professional with experience in diverse domains, including software development, AI/ML research, social media management, and teaching. Proficient in full-stack development (MERN, Next.js, Node.js), embedded systems, and deep learning applications. Successfully led social media growth initiatives. Strong problem solving and leadership skills, with a track record of optimizing workflows and enhancing productivity. Passionate about innovation, interdisciplinary collaboration, and leveraging technology for impactful solutions.

Skills

Programming Languages	HTML, CSS, Node.js, Next.js, Tailwind CSS, C, Java, R, Python, JavaScript
Communication and Collaboration	Verbal and written communication, Team collaboration, Cross-functional teamwork
Problem-Solving and Critical Thinking	Analytical reasoning, Creative problem-solving, Decision-making, Attention to detail
Leadership and Project Management	Team leadership, Agile methodology, Time management
Technical and Research Mindset	Research and data analysis, Innovation and continuous learning, Interdisciplinary collaboration, Presentation, Public speaking

Experience

Students International Affairs Society <i>Deputy Head Of Social Media And Communicatoin</i>	Jul 2021 – Jun 2022
– Joined as a General Member and contributed to the Social Media and Communication (SMAC) Team as a Content Writer & Social Media Manager. – Promoted to Deputy Head of SMAC within four months due to dedication and performance. – Engaged in international relations, diplomacy, and cultural exchange initiatives.	
Robotics Club <i>PR Team</i>	June 2022 – June 2023
– Collaborated with the PR team to promote club events, competitions, and achievements. – Strengthened communication between the club and external stakeholders.	
UIU Mars Rover Team <i>Software And Autonomous Team</i>	June 2022 – Mar 2024
– Developed a comprehensive dashboard using HTML, CSS, and JavaScript to display the rover's live location on an offline map, along with real-time camera feeds and sensor data. – Designed and implemented an embedded system for the Science Team to analyze soil composition, moisture levels, and temperature, with real-time data visualization on the frontend. – Built a promotional webpage using the MERN stack, Next.js, and Tailwind CSS to enhance outreach and engagement.	
<i>Lead of Social Media And Branding</i>	
– When I started, our page had only 3,000 likes. By leveraging marketing strategies such as influencer marketing, club collaborations, National Media collaboration and newspaper marketing we successfully grew our audience to over 20,000.	
Alo Bhubon Trust <i>Basic Computer Trainer</i>	April 2023 – Sep 2023
– Taught basic computer operations and Microsoft Office applications to underprivileged individuals, empowering them with essential digital skills.	
CDIP Fullstack Javascript Course <i>Trainee</i>	August 2024 – January 2025
– Successfully completed a 4-month Full-Stack JavaScript course, gaining expertise in front-end and back-end development.	
DSV <i>Sea Freight Operations Intern</i>	December 2024 – March 2025
– Currently interning at DSV Logistics as a Sea Freight Operations Intern, gaining hands-on experience in freight management and supply chain logistics.	

Education

- **United International University** (January 2021 – January 2025)
Bachelor of Science in Computer Science and Technology
Major: Data Science
CGPA: 3.28
- **BAF Shaheen College Kurmitola** (2017 – 2019)
Higher Secondary Certificate
Result: GPA 5.00
- **Government Laboratory High School** (2015 – 2017)
Secondary School Certificate
Result: GPA 5.00
- **BCSIR High School** (2014 – 2015)
Junior School Certificate
Result: GPA 5.00
- **BCSIR High School** (2011 – 2012)
Primary School Certificate
Result: GPA 5.00

Projects

Rider Helmet Detection Using Deep Learning

- Trained YOLO V8 based deep learning model for detecting helmet usage among riders using computer vision techniques.
- Fine-tuned YOLO v8 model using transfer learning a improve detection accuracy.
- Deployed the model for real-time monitoring and automated enforcement.

Bangla Voice Phishing Detection using NLP

- Designed and implemented an NLP-based model to detect voice phishing scams in Bangla language.
- Utilized transformers and deep learning techniques for accurate speech analysis and classification.
- Built a dataset of phishing and non-phishing audio samples for model training and validation.

Deep Learning Approach to Calculate Energy Loss from Thermal Images of Power Electric Components

- Developed a deep learning-based framework to estimate energy loss from thermal images of power components.
- Used CNNs and thermal imaging data to identify inefficiencies in electrical equipment.
- Conducted experiments to validate the model against real-world industry standards.

IntraDenonet: Multiomics Integration Using Denoising Autoencoders

- Developed a deep learning model to integrate multiomics data using denoising autoencoders.
- Implemented feature extraction and dimensionality reduction techniques to enhance classification performance.
- Conducted experiments to evaluate the model’s effectiveness in identifying biomarkers.

Protybeshi: MERN Stack Project

- Designed and developed an online borrowing and lending platform using the MERN stack.
- Implemented core features such as user authentication, item listing, and transaction management.
- Integrated a reward system to encourage responsible borrowing and lending.

Achievements

1st in Asia and 9th in the world in University Rover Challenge, NASA 2023 – Led mechanical and software development efforts for an autonomous Mars rover. – Contributed to system integration, ensuring efficient mobility and manipulation. – Conducted extensive field testing to optimize rover performance in extreme terrain.	2023
3rd in the world in Anatolian Rover Challenge, Turkey 2023 – Designed and developed robotic mechanisms for a competitive Mars rover. – Collaborated on autonomous navigation and image processing for obstacle avoidance. – Assisted in strategy formulation for mission tasks, improving team performance.	2023
1st in Asia and 5th in the world in University Rover Challenge, NASA 2024 – Led software architecture design for autonomous navigation and object detection.	2024

- Optimized control algorithms for robotic arm precision and efficiency.
- Worked on real-time telemetry and communication systems for remote operation.

1st in FPT Global Leadership Program

2022

- Selected among top candidates for leadership excellence and problem-solving skills.
- Completed intensive training in innovation, strategic thinking, and global collaboration.
- Engaged in real-world case studies to develop leadership insights and teamwork.

Scholarship for Outstanding Academic Performance

- Recognized for academic excellence in undergraduate studies.
- Maintained a top GPA while actively participating in research projects.
- Received merit-based funding for consistent high performance.
